FACILITATOR GUIDE · PART 2 · SUBJECT SESSIONS

Choosing our focus standards

How to run the subject sessions after the all-staff slides: the process, choosing, the three review views and Line up, how to confirm a review, how to view, print and export the results, and the Test / Practice version. The page is **awsaj-curriculum.github.io/awsaj-vertical-alignment/priorities.html**.

1. Open
Each subject group opens its subject, Grade 12 down.

2. Choose
Each grade or course ticks its focus standards. Grade 12 first.

3. Review and agree
The group reviews each list; the leader confirms it with the PIN.

4. Share
Print, show on screen, or download Excel.

Focus standards: the standards required for success toward graduation and success in the course, on the SAT / US Diploma pathway. The school's own Priority (6-12) and Power (K-5) standards show as star hints; teams review them and choose.

Before the session

- **How groups get in:** the subject buttons on the last all-staff slide, the subject tiles on the start page (**Part 2: Review our standards**), or the address above. Inside the Ma3loomat Google Site, press **Open full page** for a bigger screen.
- **Practice first:** the **Test / Practice version** button (under the subject tiles on the start page, and on the tool's home page) opens a copy with Math filled in: 10 to 15 made-up focus standards in every grade, some lists agreed. Try everything there; changes stay on that laptop only and never touch the real lists (section 7). **Walk-through of the PD** on the start page shows every step with a short guide.
- **The leader PIN** is only needed to agree a list and to reopen it. Keep it with the leaders; it is never shown on the site.
- **The real tool starts empty** (practice data cleared on 13 November). Every laptop works on the same lists at the same time; changes save straight away and other laptops see them within about 20 seconds.

1 The process

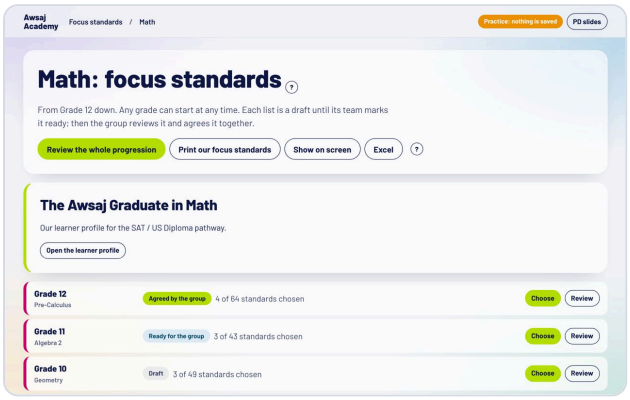

1. **Open the subject.** The subject page lists every grade or course from Grade 12 down, with its status: **Draft**, **Ready for the group** or **Agreed by the group**.
2. **Grade 12 chooses first.** Press **Choose** on Grade 12. The team ticks the standards that matter most for the pathway, adds a short note where it helps, then presses **Mark ready for the group**.
3. **Write the learner profile.** Once Grade 12 has chosen, **The Awsaj Graduate** opens: essential knowledge, essential skills, and application and independence. It can change later.
4. **Review and agree Grade 12.** Press **Review**, talk through the questions, then the leader presses **Agreed as a group** and enters the PIN.

5. **Work down.** Grade 11, Grade 10 and on. Any grade can start at any time (teams can work in parallel), but review in order from Grade 12 down so each grade checks it prepares students for the grade above.
6. **Share the results** from the subject page: print, show on screen or download Excel (section 5).

> We probably will not finish today. That is expected: this is a first draft, and everything is saved for the next session.

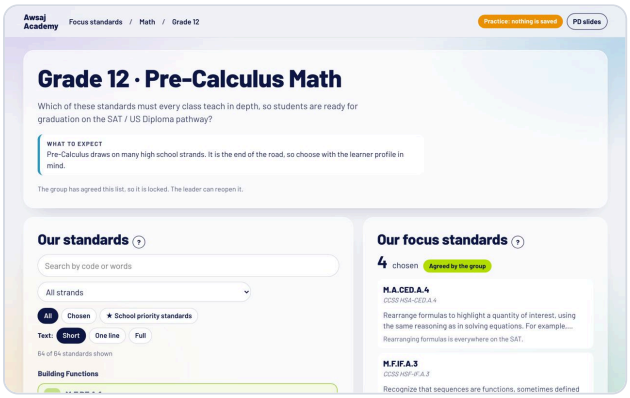

2 Choosing the focus standards

One page per grade or course. Anyone can tick or untick; the list is shared and saves as you go.

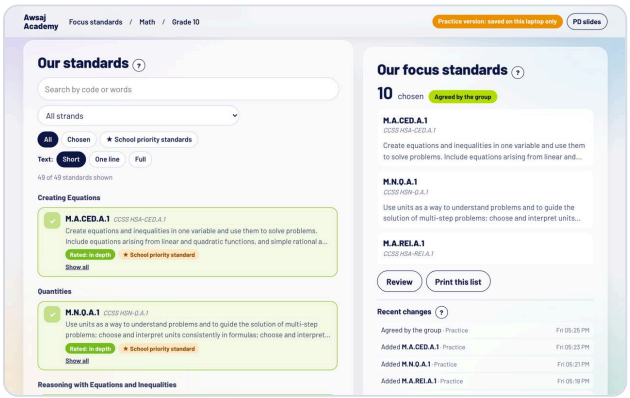

The subject page

- Every grade or course, Grade 12 down, with its status and how many are chosen.
- **Choose** opens a grade; **Review** opens the review page.
- Top buttons: **Review the whole progression**, **Print our focus standards**, **Show on screen**, **Excel**.

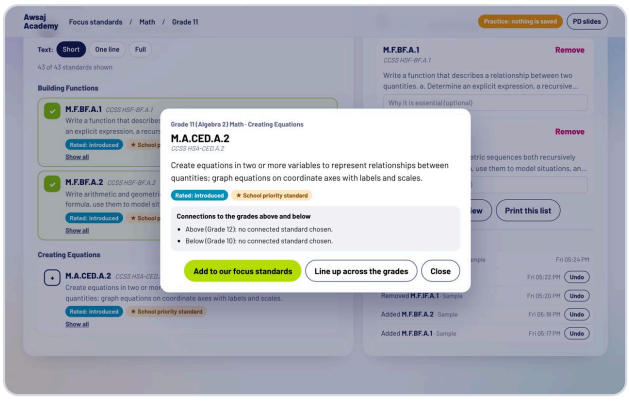

What to expect

- Every grade or course page starts with a short note: for example, Geometry starts new strands, Grades 11 and 12 English share the same standards, Grades 6 to 8 Social Studies share the same 64 standards.
- Read it aloud: it sets the right expectations and stops teams forcing connections that are not there.

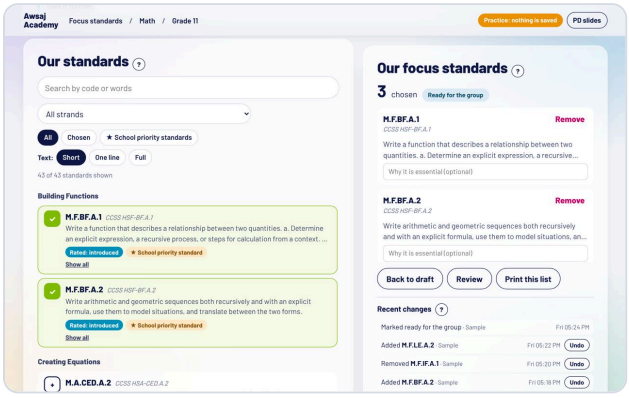

The library: our standards

- Every grade-level standard the grade rated in Part 1. Search, filter by strand, or show only **Chosen** or the **School priority / power** standards.
- **Text:** Short (two lines, the default), One line (most on screen) or Full. Each laptop remembers its choice.
- Hints: the Part 1 rating, a star for the school's own Priority or Power standards, and **Stands alone** when no standard in any other grade connects to it.
- Press **+** to add a standard; press the tick to take it off.

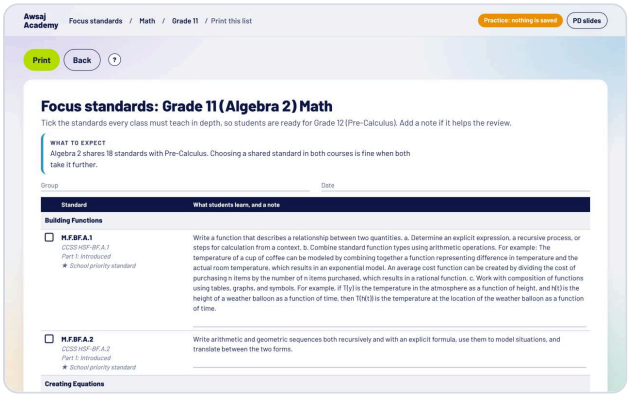

Read the whole standard

- **Show all**, or a click on the words, opens the whole standard in a popup, with its rating, its star, and **Add** or **Remove**.
- The popup also shows how it connects to what the grades above and below have chosen.

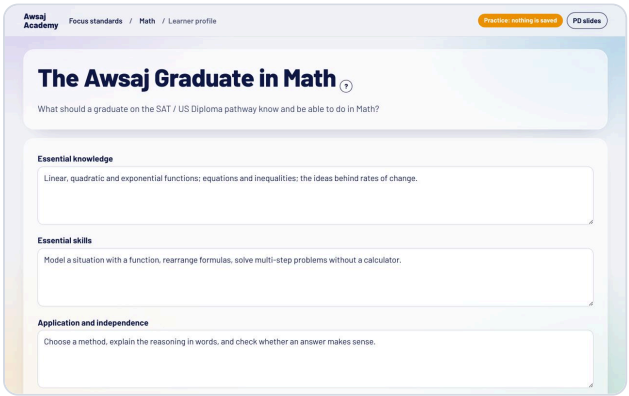

Our focus standards

- The chosen list, with how many are chosen. There is no target number.
- An optional note on each: why it is essential.
- **Mark ready for the group** when the team has finished (**Back to draft** undoes it).
- **Recent changes**: every change from every laptop, newest first. **Undo** puts back a standard removed by mistake. Anyone can undo.

Working on paper

- **Print this list** gives an A4 copy of every standard for the grade, with tick boxes and a line for notes.
- Teams on paper hand it to the leader, who ticks the same standards on the site.

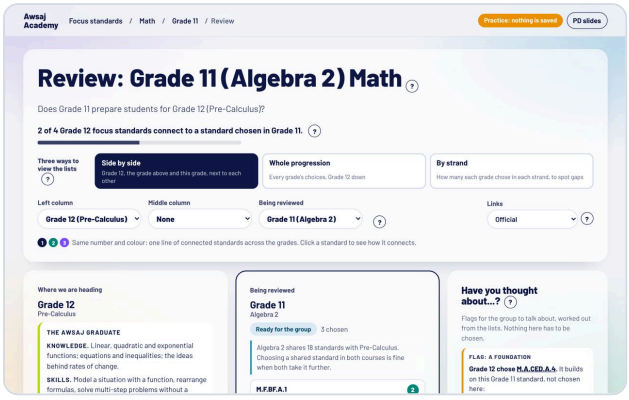

The Awsaj Graduate (learner profile)

- Opens once Grade 12 has chosen. Three boxes: essential knowledge, essential skills, application and independence.
- Press **Save the learner profile**. It appears at the top of the Grade 12 column in every review.

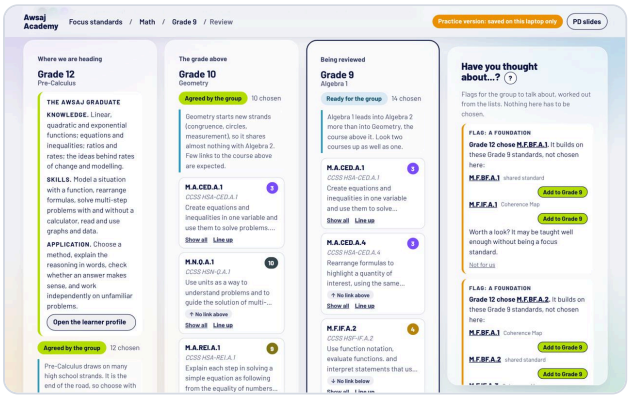

3 Reviewing: the three views

Review is one page with three ways to look at the same lists. The numbers and colours, the flags, Line up and the agree button work the same in every view. The review pages use the whole width of a wide screen.

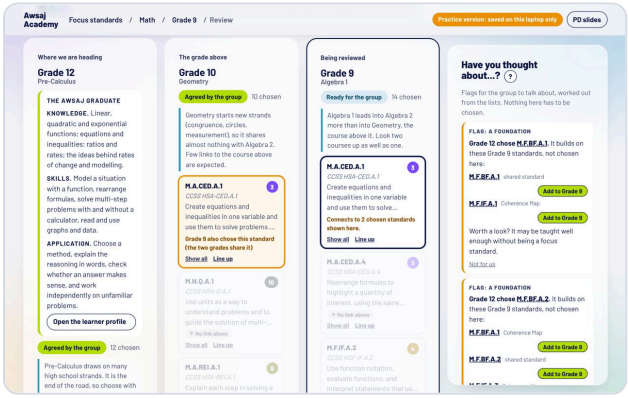

The top of the review page

- The question: does this grade prepare students for the grade above?
- The **summary line**: how many of the grade above's standards connect to something chosen here. A low number is a question, not a target.
- The three tabs: **Side by side**, **Whole progression**, **By strand**.
- The grade boxes choose which grades to show. The **Links** box chooses which connections count (below).

View 1: Side by side

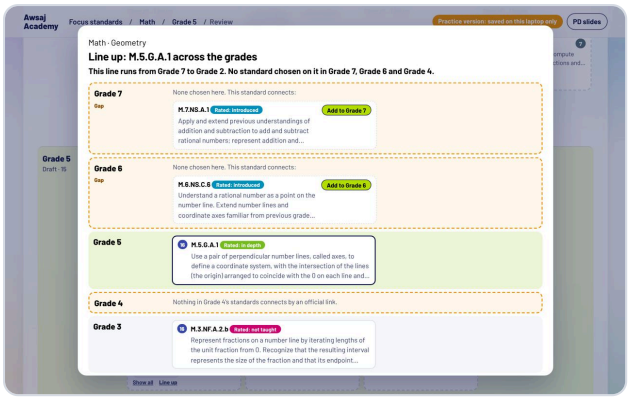

- Grade 12 with the learner profile, the grade above (Middle column, or None), and the grade being reviewed (outlined).
- Any column can show any grade, to compare, for example, Algebra 1 with Algebra 2.

Numbers and colours, and click to light up

- Each line of connected standards down the grades has its own **number and colour**, the same in all three views. Official links only by default: the Math Coherence Map, ELA anchor standards, and shared standards (one standard that sits in two grades' lists, such as high school Math standards placed in two courses).
- **Click a standard**: what it connects to lights up with a line saying how ("Builds on ...", "Grade 11 also chose this standard"), and the rest fade. Click again or press Escape to clear.
- Small tags: **No link above** or **No link below** when nothing chosen in the next grade connects; **Stands alone** when no standard in any other grade connects at all.

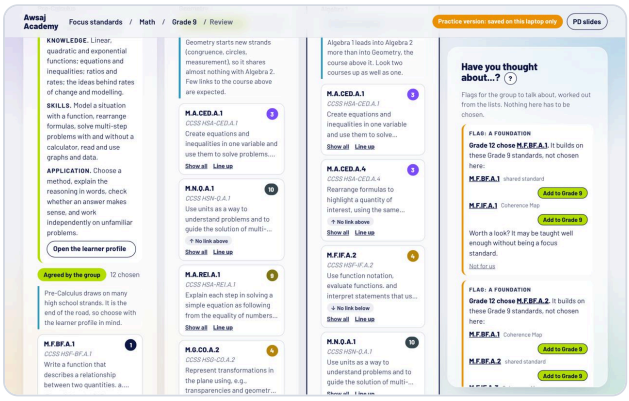

> Some standards will have no partner in the grade above. That is expected: do not force a connection.

Line up across the grades

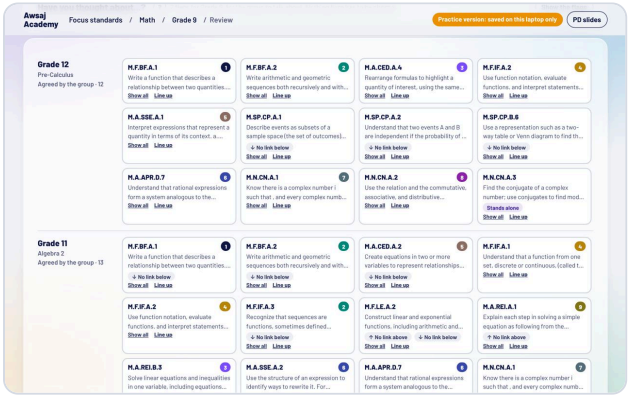

- The **Line up** button on any card (or in the standard popup) puts the standard and what connects to it in every grade in one place, Grade 12 down.
- Chosen standards on the line show with their number. Where a grade chose none, a **Gap** row lists the standards there that would connect, each with **Add to Grade X**.
- The line at the top says where it runs and where nothing is chosen, for example "No standard chosen on it in Grade 10 and Grade 8".

> Good for the question: does each grade build what the grade above needs, all the way down?

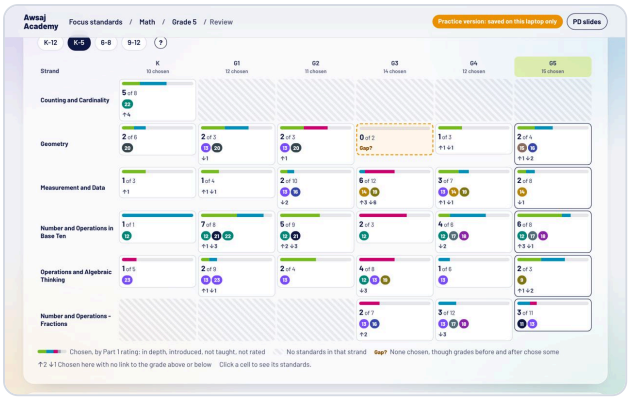

Have you thought about...?

- Flags worked out from the lists, for the group to talk about. They never mean a standard must be chosen.
- A foundation the grade above builds on; a chosen standard with no link above; a strand the grade above chose from but this grade did not; school priority or power standards not chosen; chosen standards rated Not taught in Part 1 (new teaching).
- A foundation or strand flag lists the standards it means, each with **Add to Grade X** to put it straight on the list (not once the list is agreed).
- **Not for us** sets a flag aside on that laptop.

View 2: Whole progression

- Every grade's focus standards, Grade 12 down, full width, with the same numbers and colours. The grade being reviewed is highlighted.
- Dashed cards: lists the group has not agreed yet. The flags sit in a strip above (**Show the flags**).

View 3: By strand

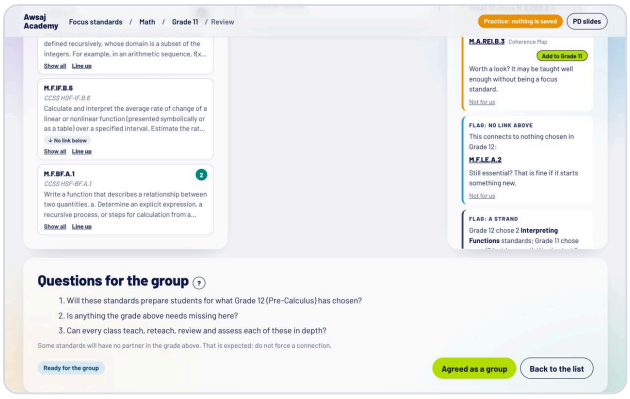

- One row per strand, one column per grade: how many were chosen of how many there are. The bar shows the chosen ones by their Part 1 rating.
- Each cell also shows the coloured numbers of the lines its standards belong to.
- **Gap?** (orange dashes): none chosen here, though a grade before and a grade after chose some in that strand, however far apart (chosen in Grades 6 and 10, none in 7 to 9: all three are marked). In Math the strand names change at Grade 9, so K-8 and 9-12 are compared within themselves.
- Arrows: chosen here with no link to the grade above or below. Hatched: that grade has no standards in that strand.
- Click a cell to list its standards and what each connects to. Buttons switch between K-12, K-5, 6-8 and 9-12.

The Links box

- **Official** (default): the Math Coherence Map, ELA anchor standards, and shared standards.
- **Official and suggested** adds possible links written by AI or matched by wording; they show dashed and say "check". Science and Social Studies have no official links, so turn this on there if the group wants to see possible ones.
- **Off** hides the numbers and link flags.

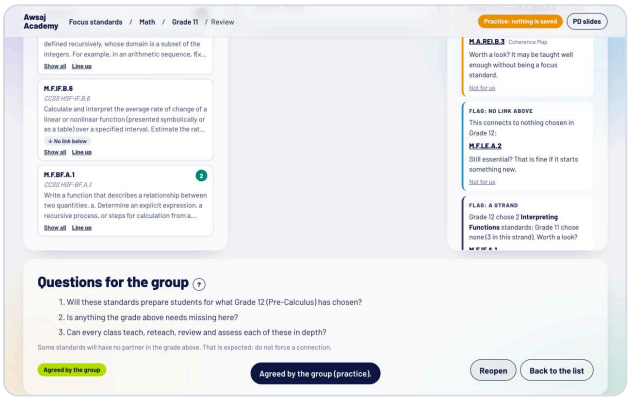

4 Confirming a review

The group agrees each list together; the leader confirms it with the PIN.

Talk it through, then agree

- Read the three questions aloud: Will these standards prepare students for what the grade above has chosen? Is anything the grade above needs missing here? Can every class teach, reteach, review and assess each of these in depth?
- Look at the flags and the numbers; change the list on **Back to the list** if the group wants to.
- When the group agrees on the set, the leader presses **Agreed as a group** and enters the PIN.

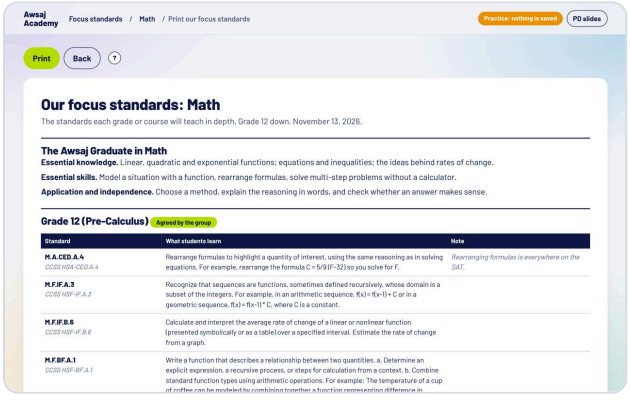

After agreeing

- The status becomes **Agreed by the group** and the list is locked: nobody can tick or untick.
- To change it later, the leader presses **Reopen** and enters the PIN. The list goes back to **Ready for the group**.
- Then move down to the next grade.

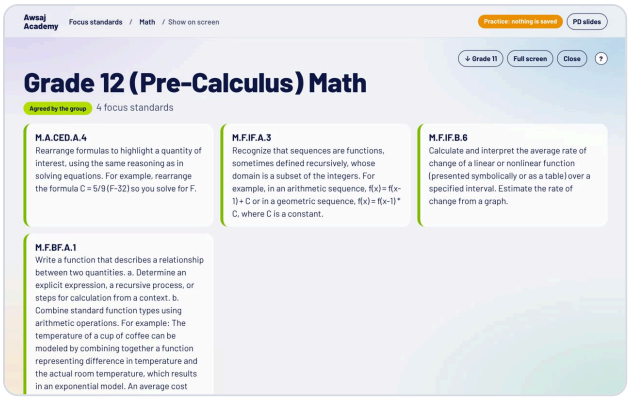

> A wrong PIN shows "Wrong PIN." and nothing changes.

5 View, print and export

Print our focus standards

- From the subject page (or the Whole progression view): every grade or course, Grade 12 down, with its status, its standards, the notes and the learner profile.
- Press **Print**: A4, or save as PDF from the print box.

Show on screen

- One grade at a time in large type, for a projector. Arrow keys, Page Up / Page Down or a clicker move between grades.
- **Full screen** hides everything else; Escape leaves it. Inside the Google Site, press Open full page first.

Excel

- Subject page: **Excel** for that subject.
- Start of the tool: **Excel: all subjects**.
- Sheets: About; Focus standards (subject, grade, course, status, code, standard, note, Part 1 rating, school priority / power); Status of each list; Learner profile.
- No PIN needed.

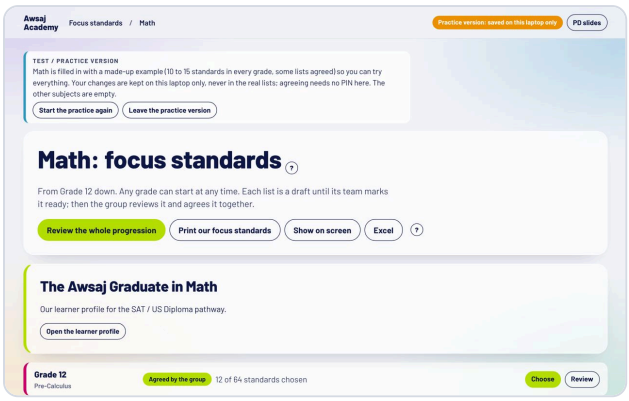

Other copies

- **Print this list** on a grade page: the paper copy with tick boxes.
- **Print** on the learner profile page.
- **Whole progression** view for an on-screen overview of the whole subject.

6 If something goes wrong

What you see	What to do
A yellow note: "Saving is not switched on"	The page cannot reach the database. Reload the page; if it stays, use the practice version or paper lists and tell the curriculum coordinator.
A standard was removed by mistake	On the grade page, **Recent changes**, press **Undo** beside it.
The ticks are grey and cannot be pressed	The list is agreed and locked. The leader presses **Reopen** (PIN) on the review page.
Someone else's changes appear	Normal: every laptop shares the same list and it refreshes about every 20 seconds.
"Not saved" in a black bar	The change did not save (for example the list was just agreed on another laptop). Reload and try again.
The page is small inside the Google Site, or Full screen does not work	Press **Open full page** at the top.
A flag disappeared	It was set aside with Not for us on this laptop. Press **Show ... set aside** at the bottom of the flags.
Practice changes are gone	The practice version keeps changes on the laptop that made them. On another laptop, or after clearing the browser, it starts again from the example.
What does a button mean?	Every part of the page has a **?** that explains it.

7 The Test / Practice version

Try it with full lists

- Open it with **Test / Practice version** on the start page or the tool's home page. A banner at the top says you are in it.
- Math is filled in for every grade (10 to 15 made-up focus standards each): Grades 12 to 10 agreed, 9 to 7 ready, 6 to K draft, with a learner profile, notes and history. The other subjects are empty.
- Everything works as in the real tool: choose, Line up, flags, the three views, agree (no PIN needed here), print, show on screen, Excel.
- Changes stay on that laptop only, never in the real lists. **Start the practice again** resets it; **Leave the practice version** goes back to the real tool.

> Good for leaders to practise before the session, and for showing a group what finished lists look like.
