Awsaj Academy

K-12 VERTICAL ALIGNMENT · AN ANALYTICAL WALKTHROUGH

Our Curriculum Journey: Grades 9–12

What our teachers' ratings tell us about how our standards are taught, K-12, and where we could go next.

From the ratings you entered as teachers (2,709 ratings, November 2026): what was reported as taught, not what students know.

Contents

1	**High school, Grades 9-12** Grades 9 to 12, all four subjects.	**3**
2	**About the data (at the back)** Where the data comes from, how to read the ratings, the words we use, the limits.	**10**

Each part: the picture (curricular capacity, grade by grade), then Facts, Patterns and Moving forward, five items each. Items link to the Vertical Alignment site. About the data is at the back. 13 pages, A4.

Taught in depth Introduced / exposed Not taught

HIGH SCHOOL, GRADES 9 TO 12

High school, Grades 9–12

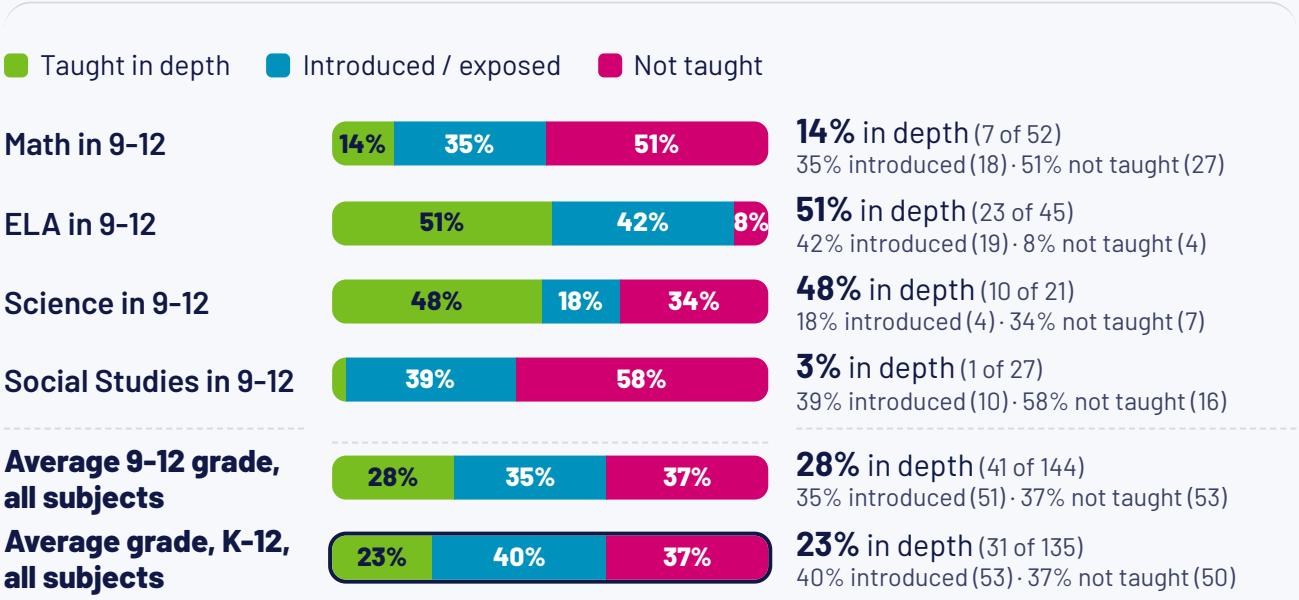

In Grades 9-12, teachers reported that 63% of the 575 grade-level ratings (377 standards) are at least introduced, and 28% are taught in depth, the highest of the three bands. ELA (51%) and Science (48%) are both strong, and Grade 10 Science has the highest share in depth of any grade and subject (79%).

THE PICTURE

At a glance: our curricular capacity

What you are seeing. An average grade in a year, by subject: green in depth, blue introduced, pink not taught, with the number of standards.

What it adds to our story. High school goes deepest of the three bands, led by ELA and Science.

Curricular capacity: what an average grade reports taking to depth, introducing or not teaching in a year. From 575 grade-level ratings, Essential Elements apart. Not a target.

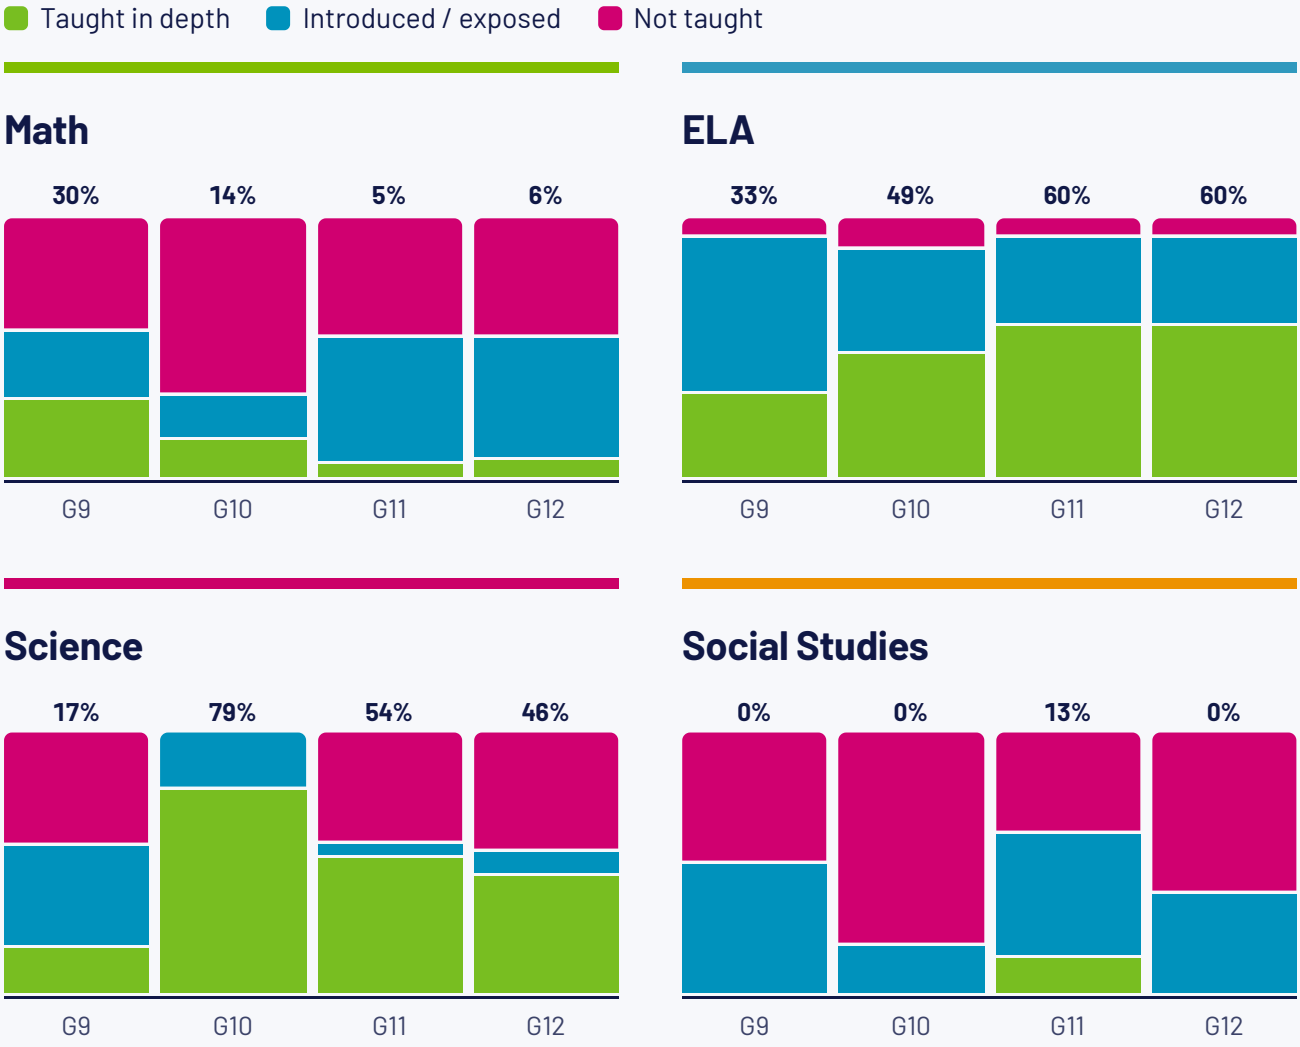

Open the coverage map on the site ↗

THE PICTURE

Grade by grade

What you are seeing. One column per grade. The top number is the share taught in depth.

What it adds to our story. ELA builds year on year, and Math is strongest in Grade 9. The picture is mostly about choices between courses.

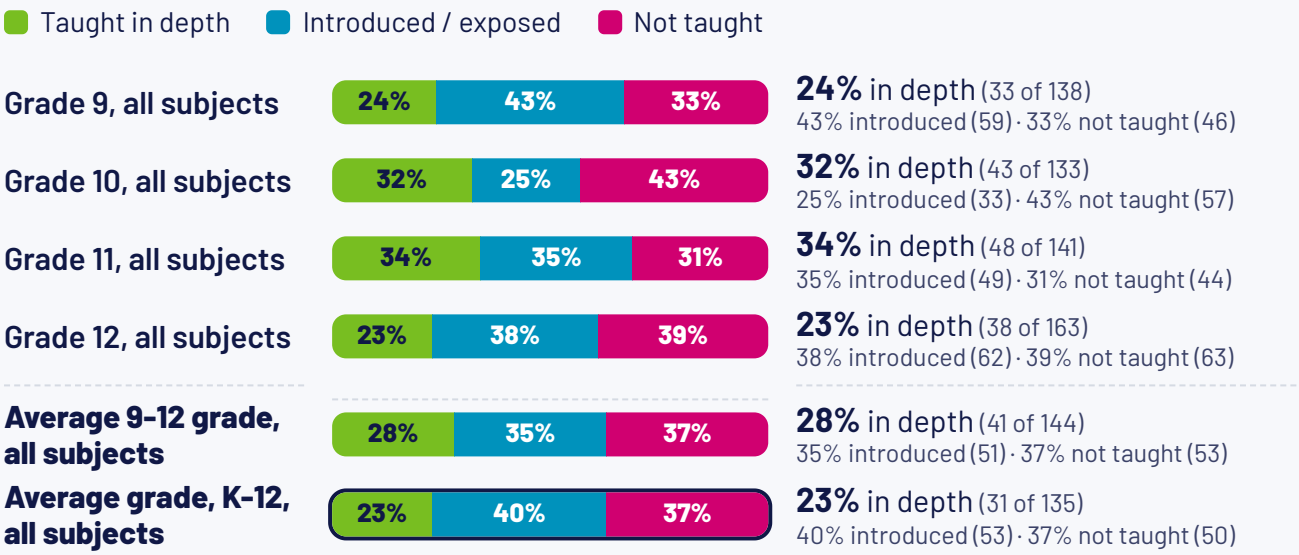

Open the grade dashboards ↗ Gaps and repetition ↗ Progressions ↗

THE PICTURE

Our curricular capacity

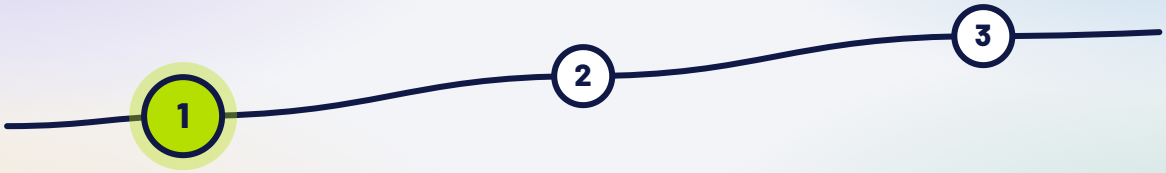

What you are seeing. One bar per average grade in a year, with the number of standards beside it; the school average last.

What it adds to our story. A 9-12 grade takes 28% of its grade-level standards to depth in a year (about 41 of 144), introduces 35% (51) and does not teach 37% (53). The average grade K-12, all subjects, takes 23% to depth (about 31 of 135).

Moving forward

SECTION 1 OF 3

Facts

What you are seeing. The five main facts. Each links to its data on the site.

What it adds to our story. Few standards are missing everywhere. Most open questions are about which course teaches what.

1. BRIGHT SPOTS **Grade 10 Physical Science is all in depth.** All 15 Grade 10 Physical Science standards are in depth, and Grade 10 rates nothing not taught. Across the band, Physical Science is 88% in depth, Life Science 50%, Earth and Space 21%, Engineering 19%. Coverage map ↗

2. BRIGHT SPOTS **ELA reaches almost everything.** Only 14 of 180 ELA ratings are not taught, and 21 of 29 ELA progressions are taught at every step. Speaking and Listening is 100% in depth in Grades 11 and 12. Progressions ↗

3. GAPS **Only 7 standards are confirmed gaps.** These 7 are not taught in any grade or course they belong to. A further 119 are not taught in the grade or course where they fit: Math 77, Social Studies 22, Science 20. Gaps and repetition ↗

4. GAPS **Social Studies has 3 of 106 ratings in depth.** All 3 are in Grade 11 Economics, and Grade 10 rates 82% not taught. All 10 Inquiry standards are rated not taught in both Grade 9 and Grade 10. Coverage map ↗

5. BREADTH WITHOUT DEPTH **128 standards are introduced, not taken to depth.** Math 52, Social Studies 36, ELA 29 and Science 11. In Math, 11 of 21 strands have no standard in depth. Coverage map ↗

Patterns

What you are seeing. What the facts show side by side. Possibilities to discuss, not conclusions.

What it adds to our story. ELA's steady, planned sequence goes with high depth, and the SAT areas in Math deserve a closer look.

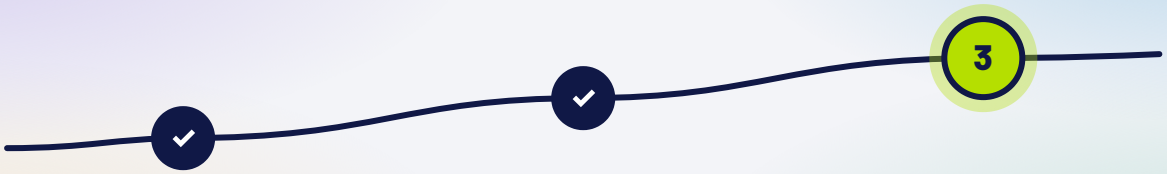

1. TRENDS ACROSS THE GRADES **Math depth thins after Grade 9, priorities too.** Math falls from 30% in depth in Grade 9 to 6% in Grade 12, while ELA rises from 33% to 60%. Priority Math is 75% in depth in Grade 9, 41% in Grade 10, then 13% and 9%. Priority and power (Audit) ↗

2. HANDOFFS **Grade 9 is a landing year.** From Grade 8 to Grade 9, ELA falls from 50% in depth to 33% and Science from 43% to 17%, while Math rises from 0% to 30%. In ELA, Grade 9 introduces and Grade 10 deepens: they agree on only 18 of the 43 standards both rate. Coverage map ↗

3. HANDOFFS **Some strong teaching rests on earlier gaps.** 20 standards taught in depth build on an earlier-school standard rated not taught: ELA 9, Science 6, Math 3, Social Studies 2. Only the 3 in Math rest on official links; 5 of the 6 in Science are Physical Science. Progressions ↗

4. LANGUAGE AND LITERACY **Language is the thinnest ELA strand again.** 30% in depth, against 54% to 69% for the other strands. It is also the thinnest strand in K-5 (10%). Coverage map ↗

5. TOWARD THE SAT **Our deepest Math is algebra, a large part of SAT Math.** In Grade 9, The Real Number System is 100% in depth, Reasoning with Equations and Inequalities 60% and Creating Equations 50%. Other SAT areas are thinner: data and statistics at or near 0%, geometry and trigonometry under 10% apart from Congruence (31%). Grade 9 dashboard ↗

SECTION 3 OF 3

Moving forward

What you are seeing. Five questions for teams, each with its data and a first step we could take.

What it adds to our story. What every graduate should leave with.

1 IMPROVING THE CURRICULUM **Which Math standards do our students most need for the SAT and the diploma, and are those the ones we take to depth?**

(Data: Algebra about 28% in depth; data analysis about 3%; geometry and trigonometry about 7%) see At a glance chart

First step: We might map high school Math against the SAT areas and choose which thin strands to deepen first.

Coverage map ↗

2 IMPROVING THE CURRICULUM **For the 119 standards not taught in the grade or course where they fit, which should each course take on, and who decides?**

(Data: Math 77, Social Studies 22, Science 20; only 7 confirmed gaps) see Fact 3

First step: We could agree, course by course, which standards each course owns and which it leaves out on purpose.

Gaps and repetition ↗

3 WORKING ACROSS GRADE LEVELS **What would help Grade 9 feel less like a restart in ELA and Science?**

(Data: Grade 9 Writing 15% in depth (Grade 10: 77%); ELA and Science both dip from Grade 8) see Fact 1

First step: We might ask Grade 8 and Grade 9 teachers in ELA and Science to plan the first unit of Grade 9 together.

Coverage map ↗

4

KNOWING THE BANDS ABOVE AND BELOW **What should middle school know about what high school finds on arrival?**

(Data: 3 Grade 9 Math standards in depth build on Grade 6 and Grade 8 standards rated not taught)

First step: We could share with middle school the 5 algebra ideas Grade 9 Math relies on most.

Progressions ↗

5

HOW WE RATE AND PLAN **Is Language (grammar, usage, vocabulary) taught through writing in high school, and would teams rate it differently if so?**

(Data: Language 30% in depth; other ELA strands 54% to 69%) see Pattern 4

First step: We could ask each ELA team whether Language is taught through its writing, and how that shows in its ratings.

Coverage map ↗

WHERE THE NUMBERS COME FROM AND HOW TO READ THEM

About the data

What our teachers reported about how our standards are taught, K-12. Eight parts: the whole school, the three grade bands and the four subjects. Each part opens with the picture (curricular capacity, grade by grade), then Facts, Patterns and Moving forward, five items each.

ABOUT THE DATA

How to read this paper

> **What you are seeing.** How the ratings were made, what the three ratings mean, and the words we use.
>
> **What it adds to our story.** It helps us read every number fairly: these are teachers' reports of teaching, not measures of what students know.

What our teachers reported about how our standards are taught, K-12. Eight parts: the whole school, the three grade bands and the four subjects. Each part opens with the picture (curricular capacity, grade by grade), then Facts, Patterns and Moving forward, five items each.

Where the numbers come from. The ratings sheet of 9 November 2026 (2,166 standards, 2,709 ratings), checked against the Vertical Alignment reports.

The three ratings.

Rating	What it means
Taught in depth	ALL classes in the grade consistently teach, reteach, review and assess the standard
Introduced / exposed	Anything in between (for example, 3 of 5 classes)
Not taught	No class in the grade teaches it

Keep in mind.

- The ratings report teaching across a whole grade, not what students know, and they judge no one.
- "In depth" is all or nothing. Teams may have read it more or less strictly.
- Much literacy is also taught in Science and Social Studies, and may not show in the ELA ratings.
- Shares are of grade-level ratings. Essential Elements are counted apart.

Curricular capacity. What an average grade reports taking to depth, introducing or not teaching in a year. Not a target: we cannot teach everything equally, so we choose the mix on purpose.

Categories. Each item carries a small label (for example Bright spots, Gaps, Handoffs), the same set in every part, so a team can follow one kind of observation across parts.

ABOUT THE DATA

Method, sources and limits

> **What you are seeing.** How the ratings were made, what the three ratings mean, and the words we use.
>
> **What it adds to our story.** It helps us read every number fairly: these are teachers' reports of teaching, not measures of what students know.

Every figure in this paper was computed from the ratings sheet and cross-checked against the site. Where the site's band and K-12 views differ (progressions), the paper says which it uses. Percentages are rounded half up, as on the site.

What was read

Source	How it was used	How fully it was read
Ratings sheet, "All Standards and Ratings K-12" (9 Nov 2026)	Every figure	All 2,166 rows
Organized ratings workbook	Cross-check of totals	All tabs
20 Findings decks (band and subject)	Cross-check, questions and next-step themes	All slides and speaker notes
K-12 Reports PDF (118 pages)	Cross-check	First 80 pages scanned by search; a few read directly
7 other Reports PDFs	Cross-check of headline figures	Scanned by search, not read page by page

How terms are used

- **Rated standards.** One rating is one standard in one grade. A standard shared by several grades is counted once for each grade that rated it.
- **At least introduced.** Rated in depth or introduced.
- **Not taught where it belongs (confirmed).** The grade the standard belongs to rated it not taught (for a standard shared across grades, every grade that shares it did). In Math and ELA each standard belongs to one grade, so this means that grade's team rated it not taught; it does not mean other grades should have taught it.

- **Not taught where it fits.** Each standard was placed in the grade or course where it fits best, and that grade or course rated it not taught. Other grades were not asked to rate it.
- **Introduced, not taken to depth.** Rated introduced by the grade (or grades) that rate it, and in depth by none. Most standards belong to one grade, so this counts what each grade introduces without taking to depth; it does not mean another grade should teach it again.
- **Progression finding.** An automatic check on a chain of linked standards: a step not taught, or a standard in depth while the one it builds on is not taught.
- **Taught at every step.** Every standard in the chain, across two or more grades, is at least introduced.
- **Progression.** A chain of linked standards across grades. Official links are the Coherence Map (Math), anchor standards (ELA) and the standards' own structure (Science, Social Studies). Other links are suggestions.
- **Curricular capacity.** The average number of standards one grade rated in depth, introduced and not taught in a year (all ratings divided by the number of grades), rounded.
- **Hand-over gap.** A standard taught in depth while a standard it builds on, placed in an earlier school, is rated not taught.
- **Priority and power standards.** Standards the school's own documents name: power standards in K-5, priority standards in 6-12.

Limits to keep in view

- Ratings are teachers' judgements of teaching across a grade. They are not observations and not student results.
- Grades may have read "in depth" differently. Uniform ratings across a whole grade are a reason to check how the scale was read; the paper points these out so teams can discuss them.
- Each team rated its own subject. Literacy taught in Science and Social Studies, and Math taught in Science, may not show in the ELA and Math ratings.
- Middle school Science and high school Math, Science and Social Studies standards were placed in the grade or course where each fits best. 24 K-5 Social Studies standards are also rated not taught in the grade where they fit.
- Band counts of progressions look only at steps inside the band, so they do not add up to the K-12 figure.

- Literacy audit figures come from the 2026 PK-5 literacy audit of weekly plans.
- Some strands have few standards in a grade, so a single rating can move a percentage a long way. Counts are given where this matters.
- Suggested links between standards (most ELA, Science and Social Studies hand-overs) have not been checked by teachers.

Status. This is a draft for the Vertical Alignment Committee. Each finding should be checked with the teams concerned before it is treated as settled. The planned review of weekly and unit plans (Part 2) will test many of these patterns against what is actually planned.
